

Welcome to the Early Childhood Education program at Region 10 Technical High School! Our program provides students with the foundational skills and knowledge needed to pursue a variety of careers in the field of education. Students gain hands-on experience working with young children, learning essential techniques for fostering growth and development. The curriculum covers child development, curriculum planning, and classroom management, preparing students for roles beyond preschool settings. Graduates can pursue careers as elementary school teachers, special education assistants, child care center directors, and educational consultants. Join us to inspire and shape the future through a rewarding career in early childhood education!
